

**LONGLEAT FOREST CENTER PARCS, WILTSHIRE**  
**M.R. SITE SERVICES LIMITED**

Longleat Forest Center Parcs which is located in 400 acres of hilly landscape in the Longleat Estate in Wiltshire has recently completed the re-roofing of the leisure pool dome that forms the central plaza on the resort.

The existing glazing and glulam structures were in need of replacement and the architect designed an insulated covering which bolstered the thermal performance of both the dry and wet sides of the building and incorporated 16 radially configured rooflights.

A total of 45 linear metres of Quantum roof access products was supplied by M.R. Site Services Limited to ensure roof safety and ease of access for maintenance. The walkway steps with hand rails to both sides were fixed back to a glulam beam rafter weathered with a single ply membrane system.

The Quantum walkway is a high quality system designed and fabricated to BS 5395 and BS 6399 in 6082-T6 aluminium. On site, the Quantum walkway is fitted to the roof sheets using stainless steel screws and purpose-made brackets.
