

BOUGHTON WATER TOWER, CHESTER
M.R. SITE SERVICES LIMITED

The refurbishment of the Boughton Water Tower roof in Chester presented an unusual challenge for M.R. Site Services. The Water Tower is a 30 metre high circular structure and contains water suitable for drinking. The Tower, which is approximately 150 years old, had moved and settled over time and required refurbishment of the roof.

A lightweight steel roof structure was specified and M.R. Site Services supplied the walkway and the fabrications (inner and outer soakers). The company also supplied, fixed and welded an access hatch to the roof and undertook the aluminium site welding.
