

WORLDWIDE HOUSE, BRACKNELL
ARCHITECTURAL PROFILES LIMITED

Worldwide House on the Western Estate in Bracknell stood unoccupied for a long time. Clearly in need of a facelift, architects Cube Interiors specified Architectural Profile Limited's products and systems to set about the remodelling process which centred around the provision of a stunning new entrance feature.

The result is exceptional and the building is now occupied. The system used was an APL Slimwall™ aluminium rainscreen produced in a robust and totally weather resistant Alucobond flat panel composite material. Slimwall™ brings many system performance benefits to the project which not only encompasses budget but energy performance, speed of construction and maximisation of internal working area.

Architectural Profiles Limited is widely recognised for its extensive portfolio of metal cladding systems and facings which encompass, StrongBak™ structural wall framing system, Tritherm™ fixings systems (including Handi-Bracket™), Energi™ roof and wall insulated systemsand many more.
