

## ENVIRONMENTAL HUB, MIDDLEWICH BRETT MARTIN DAYLIGHT SYSTEMS

Brett Martin Daylight Systems has supplied 1,000 metres of red and blue double skin factory assembled insulating rooflights (FAIRs) to provide an even and diffused daylight spread in Middlewich environmental hub in Cheshire.

The hub operates as a multi-use site and the angled composite panels were fitted to a recycling centre as well as a vehicle workshop. The FAIRs were manufactured to meet the specific light transmission requirements stipulated by the customer and specified to meet insulation, fire and safety requirements.

The hub aims to end the landfill disposal of black-bin waste in the Borough and provide a site for Ansa Environmental Services, Cheshire East Council's operating company for recycling and streetscape services, to run waste collection and recycling, parks and street cleansing services for the Council.

The environmental hub will enable the Council to increase its recycling, attain targets in waste collection and at the same time have wider economic benefits, preserving existing employment through the relocation of jobs to Middlewich.

### **Specification**

System: Double skin FAIRs

Quantity: 1,000 metres

Glazing: Coloured Trilite GRP

**Daylight Systems**
