

**AMBULANCE STATIONS, YORKSHIRE**  
**ASH & LACY BUILDING SYSTEMS LIMITED**

Ash & Lacy Building Systems has proved invaluable to several Yorkshire ambulance stations that have undergone refurbishments or re-roofing. Stations from the Yorkshire Ambulance service in Halifax, Longley and Rotherham all decided Ash & Lacy's AshJack flat to pitched roofing system would be the perfect solution to eradicate the long term water ingress problems that were affecting all the sites.

Abbey Construction Consultants worked alongside Yorkshire Ambulance Service on the stations, all of which are flat-roofed and all comprising of a large garage and offices. The stations were typical of flat-roofed buildings with inherent water seepage problems including degradation of brickwork. Typically the garages are around 400square metres and the offices between 200square metres and 400square metres. All required an over-roof conversion system to address the problems.

Ash & Lacy's AshJack was specified by Abbey CCL following their research into other comparable systems which proved Ash & Lacy to be superior and the best solution for all of the projects, despite their slightly differing requirements. AshJack provides a permanent weathertight solution for a wide range of failed flat roofs. Furthermore, AshJack is highly cost effective and comes into its own when meeting the very tight budgets of refurbishment projects, whether for the public or private sector. In this case it allowed remedial work to be carried out rather than incurring the costs of a completely new roof.
