

Designing for international projects

Aluminium standing seam roofing and cladding

Kalzip specialises in the international manufacture and supply of standing seam roofing and wall cladding systems for building envelopes. Bringing together a wealth of experience over a range of disciplines Kalzip's International Project Team supports architects, clients and design teams who are working on global projects across international borders.

Kalzip presentation

The presentation offers practical advice and guidance on the challenges raised when designing for an international project, providing clear direction with established levels of responsibility – from building a robust specification to creating a coordinated, cohesive team to support the project both technically and commercially through the various stages of design, delivery and installation.

International project presentation – details and aims

Your targets

- World class architecture
- Compliant building standards
- Durable and sustainable roof and façade systems
- Flexible design options
- Affordable solutions
- Right first time installation
- Proven performance
- Availability and suitability of system materials

What we offer

- Regional assistance
- A more in-depth knowledge of the impact of regional variations
- Technical know-how and competence
- Clearer directions of the requirements from concept to completion
- Information on factors that can make or break the successful implementation of a robust specification
- A greater understanding of cross border complications and how to control these from the outset
- Specification advice

Advice and support on

- Local building standards
- Regional climate considerations
- Budget pricing
- Green building solutions
- Logistical solutions
- Structural, acoustic and thermal calculations
- Installation
- Interface details
- Geometric complexity and building solutions
