

## BLYTH BOATHOUSE RESTAURANT A STEADMAN & SON

Leading building products manufacturer Steadmans netted another enviable order when it supplied materials for a new seafood restaurant in Northumberland.

The company, a principal UK supplier for steel construction in the agricultural, industrial and commercial sectors, provided 145 square metres of Meta-Slate Plus for the roof of Blyth Boathouse Restaurant. This material consists of Steadmans' Meta-Slate roofing sheets fixed to its AS35 insulated panels. The organisation supplied all flashings and purlins for the project too.

JW Colpitts, the Blyth-based steel fabricators, builders and joiners, who are also marine, general and wind farm engineers, installed the materials at the site on the banks of the River Blyth.

Graham Short, of JW Colpitts, said: "We've used Steadmans products for the last couple of years on other types of projects, such as warehousing jobs, since coming across their materials originally through a steelwork supplier. We've always found the company's output thoroughly reliable, their people extremely helpful and their customer service excellent, so we had no hesitation in going directly to them again when we needed roofing materials for Blyth Boathouse Restaurant."

The innovatively-designed new outlet, which has brought 12 jobs to the town, is part of the striking, purpose-built Blyth Boathouse. This also contains a boat building workshop and heritage centre, where tourists can discover more about the historic port. The building, which is owned by the Port of Blyth, is now the flagship business in the regeneration of Quay Road and surrounding area.

Steadmans' overall output includes steel cladding, galvanised roofing sections, composite wall and roof sheets, metal cladding, roofing products and fibre cement sheeting. All its relevant products conform to CE marking regulations and meet their requirements.
