

**ETIHAD FOOTBALL STADIUM, MANCHESTER**  
**M.R. SITE SERVICES LIMITED**

The Etihad Stadium, home of Manchester City Football Club has completed the first phase of the stadium's expansion programme with the construction of a third tier of seating in the South Stand to provide an additional 6,000 seats.

A total of 400 linear metres of Quantum roof access products was supplied by M.R. Site Services Limited to ensure roof safety and ease of access for maintenance. The walkway with a hand rail to one side was fixed back to a Kalzip 65/400 standing seam roof system. For added safety, the walkway incorporates steps fitted on to the differing Kalzip roof areas and a free-standing hand rail fixed along a single ply membrane gutter.

The Quantum walkway is a high quality system designed and fabricated to BS 5395 and BS 6399 in 6082-T6 aluminium. On site, the Quantum walkway is fitted to the roof sheets using stainless steel screws and purpose-made brackets.

The roof of the expanded stadium has been designed with the same elegant sloping dimensions of the existing stadium roofline. The roof blends in with the rest of the stadium whilst maintaining the recognisable masts and cables which make the Etihad Stadium a Manchester icon.
