

DISTRIBUTION CENTRE, AVONMOUTH BRETT MARTIN DAYLIGHT SYSTEMS

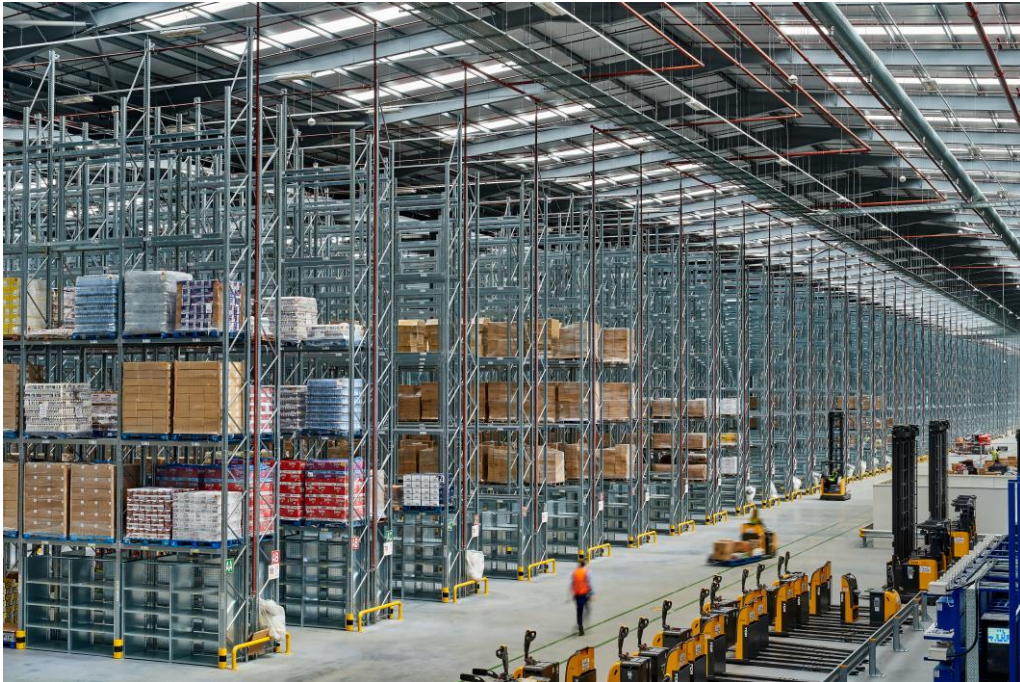

Image courtesy of McLaren Construction

Over 13,000 square metres of Trilite GRP triple skin Energysaver FAIRs (factory assembled insulating rooflights) were commissioned to bring natural diffused daylight into the enormous new build Range Distribution Centre in Avonmouth. The Range is located within Central Park, one of the most extensive distribution developments in the UK.

At 1.2 million square feet and at a cost of £100 million, the Range is the largest ever distribution warehouse in the region. It has been constructed to respond to changes in consumer shopping habits and will serve to boost the significance of the location as a natural distribution hub.
