

FRATTON PARK, PORTSMOUTH
HAMBLESIDE DANELAW LIMITED

Zenon Pro rooflights have been specified for the refurbishment of one of the football stands at Portsmouth FC's historic Fratton Park.

This project involved the replacement of existing rooflights on the Fratton End Stand at Portsmouth Football Club. Hambleside Danelaw supplied the project with 211 metres of rooflights to match the 32/1000 forward profile in Zenon Pro 24.

Zenon Pro rooflight sheets are suitable for installing as single skin assemblies as well as double skin. They comply with CE marking, meet non-fragility requirements and they offer high levels of natural daylight.

Tom Litchfield; Director of Industrial Roofing, Cladding and Consultancy Ltd who carried out the refurbishment said, 'We have consistently found that Zenon rooflights from Hambleside Danelaw are great value and of very high quality'.

Industrial Roofing CC Ltd is an industrial roofing and cladding company focusing primarily on the refurbishment markets of industrial and commercial buildings. Their typical projects include large and small scale roof refurbishment, creating bespoke maintenance packages to suit differing client requirements.

Other elements to this refurbishment project included Giromax end lap treatment, repairing the original roof sheets, renewal of failing roof flashings and the installation of a new safety line.

Replacement of rooflight

A team of four completed the project within a strict time schedule, finishing the work during the closed season. Industrial Roofing CC Ltd has also been contracted to complete repairs to the North and South stands within the ground matching the same specification.
