As Porsche adopt a 'non-combustible' façade policy, Architectural Profiles Limited is proud to be a specified supplier of their façade claddings.

Always at the forefront of innovation and safety, Porsche has recently adopted a 'non-combustible' policy for the facades of their buildings. Not only does this provide the obvious safety benefits but it also means that the Dealerships pay much lower insurance premiums as a result of not using flammable materials in their building envelopes.

Having supplied numerous Porsche projects over the years, APL is ideally placed to supply their Alucobond® Rainscreen panels for the distinctive curved facades to the showroom areas. APL also supplies the profiled cladding systems for the workshop areas in an exclusive smooth coated Porsche signature colour

APL has promoted non-combustibility constructions for many years and has developed products and systems accordingly. With a full 25 year 'full system' warranty, it can come as a surprise to many designers to discover that this safer approach is also more economical than using flammable foam insulation-based systems.

Other automotive marques that have specified APL facades include: Audi, BMW, Ferrari, Ford, Honda, Jaguar Land Rover, Lamborghini, Maserati, McLaren, Mercedes, MNI, Rolls Royce, Smart, Tesla, VAG Group, Vauxhall and Volvo.
