

### WHITE ROSE SHOPPING CENTRE, LEEDS SOTECH LIMITED

Over 1,200 square metres of Alucobond Silver Metallic 500 and 900 square metres of aluminium anodised Regency Gold 1 have been used in the completion of the White Rose shopping centre in Leeds.

With its unique flatness, Alucobond (in Silver Metallic 500) was the perfect choice for the large panelling on the sizeable building. Its design creates a smooth monolithic surface with exceptional load-bearing capacity and strength.

Alucobond Aluminium Composite Material (ACM) was used in conjunction with aluminium anodised (in Regency Gold 1) as textures and patterns can easily be incorporated in the anodic film, enhancing the natural metallic appearance without affecting the total UV resistance of the rainscreen cladding.

Perforation was added to the face of the anodised units as the cavity behind had LED lighting to illuminate the façade. The finish looks spectacular, especially when lit up in the evening.

The silver metallic and anodised gold colours combine perfectly to give a quality and visually appealing finish to the leisure and entertainment aspect of the shopping centre which houses an 11 screen Cineworld IMAX cinema, six new restaurants and an outdoor live events space.

Architect	Harris Partnership
Main contractor	Morgan Sindall
Installer	Roofdec
System	Optima TFC through fix cassette rainscreen, FC secret fix rainscreen and perforated FC secret fix rainscreen
Material & finish	Alucobond Silver Metallic 500 (TFC), aluminium anodised Regency Gold (FC and perforated FC)
Location	Leeds
