MCRMA ANNOUNCES WINNER OF THE AWARD FOR THE BEST USE OF A RAINSCREEN SYSTEM USING ALUMINIUM

The Metal Cladding & Roofing Manufacturers Association (MCRMA) is delighted to announce that the winner of the award for the *Best use of a rainscreen system using aluminium* is Proteus Facades. The award, sponsored by MCRMA, was presented at today's Façade Awards UK ceremony hosted by RCi Magazine at the Midland Hotel, Manchester.

Mr Carlton Jones, director of MCRMA and a member of the judging panel, commented "MCRMA is delighted to present this award to Proteus Facades. All the entries were of a high standard however, we were particularly impressed by the way that the Proteus facade system transformed the appearance of the building. The introduction of both colour, together with the incorporation of a pierced and elaborate laser cut pattern, highlighted the building which is located in a prominent corner position."

The Proteus SC cladding panels used in this six metre high façade are arranged in a striking half-hexagon design that appears to float outward from the main structure and the panels themselves are embellished by intricately designed, leaf-shaped perforations. Proteus SC is an engineered panel system that is offered in either solid, perforated or mesh panel formats. By utilising an extensive range of metals, colours, textures and forms it can add another dimension to any façade cladding project.

The MCRMA was formed in 1990 to support the systems manufacturers in the emerging metal cladding and roofing industry. Since then, MCRMA has evolved to encompass the needs of component manufacturer suppliers, systems installers, independent roofing and cladding inspectors plus industry support services providers, all providing independent building envelope solutions for metal-based roofing and cladding systems, products and services.
