

The Building Envelope Authority

MCRMA TECHNICAL APPRECIATION COURSE

This three-day course covers building physics and design theory and practical hands-on installation on roof and wall installation rigs. The course is intended primarily for new starters from MCRMA member companies who need to have a grounding in theory and practice plus an understanding of the technology and the terminology used.

The course provides students with the opportunity to have hands-on experience with all the components, understand how the components interface and have the opportunity to deal with the practical side of installing products and systems from member companies.

It offers an introduction to the subject so that students from various office-based jobs can say that they understand the complexities of the associated products and systems and can talk to specifiers with a level of understanding and authority.

The course is not suitable for those who have experience of roofing and cladding installation or those who are looking for full NVQ status.

The course is held at SPV Group head office in Walsall, west Midlands. Each course is delivered to a maximum of eight people to ensure the right level of involvement. Travel and accommodation are the responsibility of each delegate and all course attendees are required to provide their own PPE.

The cost of the three-day course per delegate:

MCRMA members - £650 + VAT

Non-members - £1000 + VAT
